

Exhibit 6

Claim	Analysis
<p>[10.1] communications system comprising:</p> <p>A</p>	<p>To the extent preamble is limiting, Dell Technologies (“Defendant”) makes, uses, sells and/or offers to sell a communications system.</p> <p>This element is infringed literally, or in the alternative, under the doctrine of equivalents.</p> <p>For example, Defendant provides Latitude 7424 Rugged Extreme Laptop¹ (used herein as an exemplary product) which supports Windows 10 has Find My Device feature to allow users to perform security functions of the Latitude 7424 Rugged Extreme Laptop when it is stolen or lost by using a communication network (Wi-Fi network). The user logs in into the Find My Device account on another device using Microsoft account ID associated with the lost/stolen Latitude 7424 Rugged Extreme Laptop in order to locate the device.</p> 

Latitude 7424 Rugged Extreme Laptop

¹ While Latitude 7424 Rugged Extreme Laptop has been used as an exemplary infringing product, all Dell laptops/tablets including but not limited to Latitude 5424 Rugged, Latitude 12 7220 Rugged Extreme, and Latitude 7220EX Rugged Extreme Tablet as well as variants and versions of these products have same functionality. The presently charted exemplary infringing product is representative for purposes of illustrating infringement of the other Dell devices.

Find and lock a lost Windows device

Applies to: Microsoft account, Windows 10

Find My Device is a feature that can help you locate your Windows 10 device if it's lost or stolen. To use this feature, sign in to your device with a Microsoft account and make sure you're an administrator on it. This feature works when location is turned on for your device, even if other users on the device have turned off location settings for their apps. Any time you attempt to locate the device, users using the device will see a notification in the notification area.

- This setting works for any Windows device, such as a PC, laptop, Surface, or Surface Pen. It needs to be turned on before you can use it.
- You can't use it with a work or school account, and it doesn't work for iOS devices, Android devices, or Xbox One consoles. Here's [what to do if your Xbox gets stolen](#).

Source: <https://support.microsoft.com/en-us/help/11579/Microsoft-account-find-and-lock-lost-windows-device#:~:text=Find%20your%20Windows%20device,map%20showing%20your%20device's%20location>

Turn on Find my device

When you set up a new device, you can decide whether to turn on or turn off the Find my device setting. If you turned it off during setup and now want to turn it on, make sure your Windows device is connected to the internet, has enough battery power so it can send its location, and that you're signed in to the device using your Microsoft account.

1. On the device that you want to change, select Start  > Settings  > Update & Security  > Find my device.
2. Select Change for the device you want to change.

Source: <https://support.Microsoft.com/en-us/help/11579/Microsoft-account-find-and-lock-lost-windows-device#:~:text=Find%20your%20Windows%20device,map%20showing%20your%20device's%20location>

Find your Windows device

1. Go to <https://account.microsoft.com/devices> and sign in.
2. Select the Find My Device tab.
3. Choose the device you want to find, and then select Find to see a map showing your device's location.

Note

You can locate a shared device only if you have an administrator account on it. On the shared device, select Start  > Settings  > Account  > Your info  to see if you're an administrator.

Find and lock a lost Windows device

Applies to: Microsoft account, Windows 10

Find My Device is a feature that can help you locate your Windows 10 device if it's lost or stolen. To use this feature, sign in to your device with a Microsoft account and make sure you're an administrator on it. This feature works when location is turned on for your device, even if other users on the device have turned off location settings for their apps. Any time you attempt to locate the device, users using the device will see a notification in the notification area.

- This setting works for any Windows device, such as a PC, laptop, Surface, or Surface Pen. It needs to be turned on before you can use it.
- You can't use it with a work or school account, and it doesn't work for iOS devices, Android devices, or Xbox One consoles. Here's [what to do if your Xbox gets stolen](#).

Turn on Find my device

When you set up a new device, you can decide whether to turn on or turn off the Find my device setting. If you turned it off during setup and now want to turn it on, make sure your Windows device is connected to the internet, has enough battery power so it can send its location, and that you're signed in to the device using your Microsoft account.

1. On the device that you want to change, select Start  > Settings  > Update & Security  > Find my device.
2. Select Change for the device you want to change.

Find your Windows device

1. Go to <https://account.microsoft.com/devices> and sign in.
2. Select the Find My Device tab.
3. Choose the device you want to find, and then select Find to see a map showing your device's location.

Note

You can locate a shared device only if you have an administrator account on it. On the shared device, select Start  > Settings  > Account  > Your info  to see if you're an administrator.
